Welcome to the ZUBASweb of the Mercedes-Benz locations

ZUBAS stands for Access and Visitor Management System and is used to register visitors as well as to request and approve access to premises, buildings, and zones.

For support requests, please use our Self Service:

>>> General in ZUBAS

>> No access to room zone

>>> Approver receives no/incorrect requests

>> Adjusting room zone approver

>> Adjusting room zone name

>>> Enabling/Deactivating room zone

>> Deputy/Delegated configuration

Mercedes-Benz

The Mercedes-Benz logo, a three-pointed star inside a circle, is positioned in the bottom right corner of the slide.

General

Welcome to the ZUBASweb Help Center

ZUBAS is a German abbreviation for Access and Visitor Management System. The web-based application is used to register visitors and to request and approve access to the premises, buildings, and zones of Mercedes-Benz locations* worldwide.

For questions regarding the application and access**, the central Corporate User Help Desk (CUHD) is available to all employees worldwide.

✉ cuhd_support_idb@mercedes-benz.com

☎ +49 (0) 711 17 94944 (Monday to Friday, 7:00 a.m. to 6:00 p.m. CET)

Further information may be found on the social intranet of your local site security.

*Includes all subsidiaries

**Only for locations where ZUBASweb is implemented

Help Content and Structure

The help is a PowerPoint-based document containing general information for ZUBASweb. The document primarily uses hyperlinks. Clicking on the hyperlinks (indicated by italics and) will take you directly to the desired content. Clicking on the icon at the bottom right of the page will take you to the detailed overview. You will also be guided step-by-step through the respective application types. The system and the help file are available in German and English. 

The document is divided into the following main sections:

1. Basic Topics
2. Application Submission
3. Approvals
4. Your Own Applications
5. Additional Functions

A detailed overview can be found on the next page.

If necessary, use the search function (Ctrl + F) in Adobe to find specific information.

3.1 Email Functions

3.2 Application Submission for External Users

3.2.1 EMT

3.2.1 Alice

3.3 Data Protection Information

1 Fundamental Topics

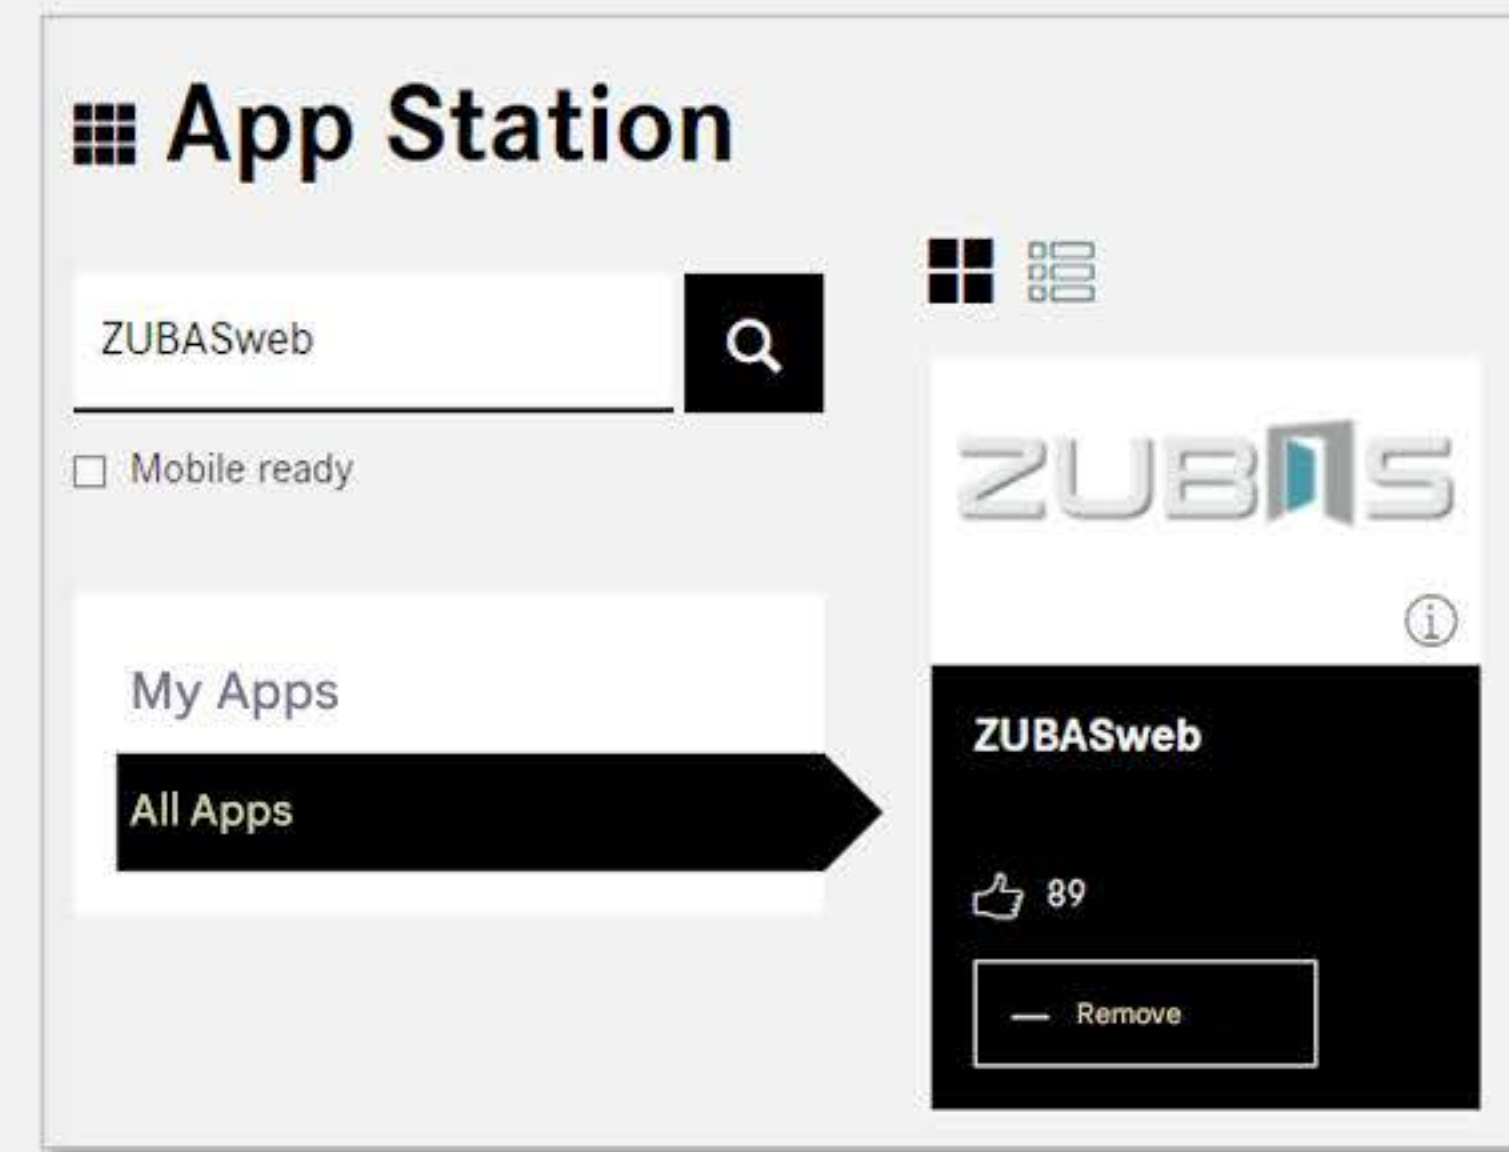

1.1 Access Control

The application is integrated into the social intranet as a web application and can be found via the App Station.

No individual access rights are required for the application. It is automatically accessible to all Mercedes-Benz employees as part of user management in the Corporate Directory.

For access by external partners, a user account and an email address must be present in the EMT (Entry Management Tool). The corresponding role must also be requested via the Alice system. This functionality is reserved exclusively for representatives.

Information about the EMT can be found here (Chapter 3.2.1).

1.2 Process Definition

The following application types are available for submission in ZUBASweb

1. Visitor

The previous application types Day Visit and Multi-Day Visit are combined into the Visitor application type and used for registrations of up to 28 days for a continuous period. The start date can be in the future. With this application type, the visitor is issued a temporary badge at the gate. For employees, the access right is transferred to their permanent employee ID card.

2. Badge Authorization

When applying for badge authorization (formerly called badge authorization), longer-term access authorizations of 28 days or more are requested. For external workers, the application period is limited to a maximum of 1 year, for Mercedes-Benz employees to 2 years, and must then be extended if necessary. Corresponding reminder functions are in place. Depending on site specifics, the application may result in the creation of a personally assigned physical access medium

Note: At the major German Mercedes-Benz plants, visitor registrations and employee ID authorizations are activated immediately on the employee ID card upon approval. External workers and private individuals receive a visitor badge at a staffed visitor registration gate. For ID authorizations, an external company ID card

must be issued. Each person (employee/external worker) may only possess one Mercedes-Benz ID card. This can be used at the major German Mercedes-Benz plants and at many other locations. The regulations for the use of access media generally differ depending on the location.

1.3 Approval Rules

The following basic structures are defined for the individual request types

For locations with development areas

- Visits lasting only one day can be received independently by all development staff and specially authorized individuals (no approval required). All other individuals can create registrations, in which case a development host must be selected. The E3 assigned to the host must approve the visit in these cases.
- Visits lasting longer than one day and badge authorizations require approval (minimum E3).

For other locations

- Visits to peripheral locations are generally approval-free; only special areas always require approval. The possible approvers are predefined and, if necessary, made available for selection by the system.
- Badge authorizations require approval for peripheral locations and require approval by at least E4. Special areas always require approval. The possible approvers are predefined and, if necessary, made available for selection by the system.

Approval of externally submitted requests

- For external applicants, the Mercedes-Benz EMT coordinator will act as the host. This coordinator, or their relevant managers, will automatically be appointed as the approver, depending on the application type.

1.4 Responsibilities

Within the workflow processes, there are various roles with different responsibilities.

Applicant

The applicant is primarily responsible for creating the ZUBASweb application. They automatically act as the host unless this is changed manually.

Host

The host (usually also the applicant) is the direct contact person and is therefore responsible for the necessity and duration of the visit or access rights from a technical perspective. The regulations of Mercedes-Benz AG apply, which always require a business purpose as a prerequisite for access to the respective area. Furthermore, the applicant must ensure that necessary training is provided in a timely manner and documented according to the regulations. They may also be required to provide proof in these matters. If the host differs from the applicant, the responsibilities are transferred to the new host.

Approver

The approver assumes the role of the landlord. He/she assesses the stated necessity, also taking into account the respective security requirements. The approval function can be delegated to another person (see Chapter 1.5)

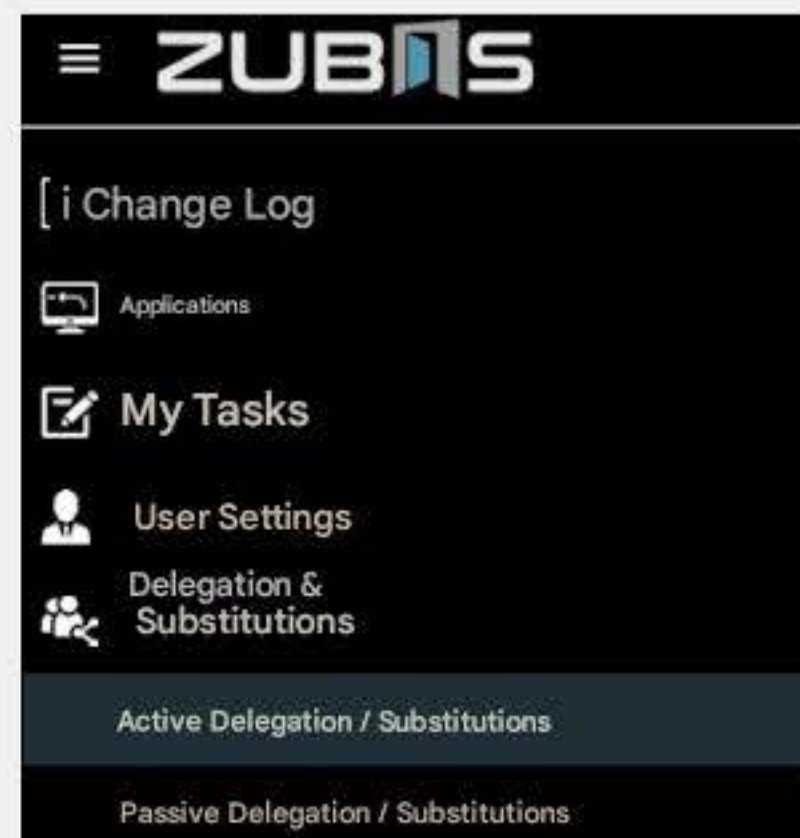

1.5 Delegation & Substitutions Active Delegation / Substitutions

Active Delegation / Substitutions indicates whom the approver has designated as a delegate or deputy.

Approval rights can be transferred to another person at any time. The approver has three basic functions available:

1. Delegation of approval rights to another person in full.

This person is automatically activated as an approver for corresponding requests.

Help File

User Settings

Define your desired options for delegations or substitutions here. The definitions are made at the plant level (sub-level) of the sites. Delegations and substitutions can generally be defined as time-limited or unlimited. Notification settings can also be defined at the bottom of this page.

Delegate for Approvals - Delegates are automatically listed as approvers in the application. Only one entry per project is possible. You will no longer receive email notifications for approvals.

Project (Name) Add Delegate

Selected (0)

☐ Limited ☐ Unlimited

dd.mm.yyyy ☐ dd.mm.yyyy ☐ Add

Project (Name)	Delegate	Unlimited	Start date
No record available			

Procedure

1. Select the "Delegation & Substitution" tab
2. Select "Active Delegation / Substitution"
3. Select the relevant project
4. Appoint the relevant person
5. Decide on the time limit
6. Add your selection
7. To activate, click the "Save" button

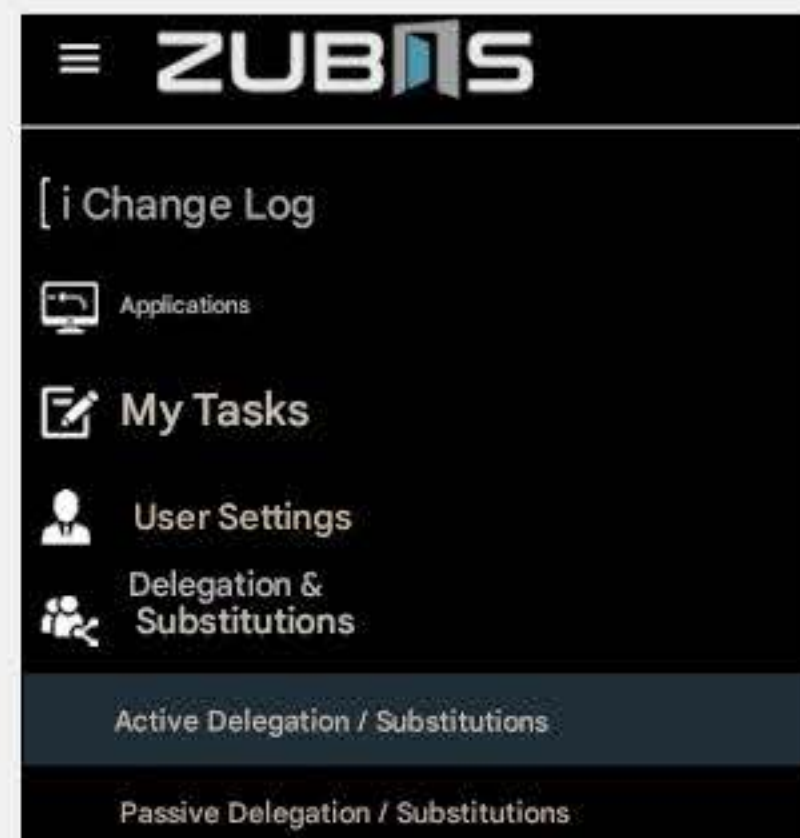

→ Steps 3-7 must be performed individually for each project

1.5 Delegation & Substitutions Active Delegation / Substitutions

Active Delegation / Substitutions indicates whom the approver has designated as a delegate or deputy.

Approval rights can be transferred to another person at any time. The approver has two basic functions available:

2. Substitution - Transfer of approval rights to one or more other persons.
These persons are available for approval selection during the application process.

[? Help File](#)

User Settings

Define your desired options for delegations or substitutions here. The definitions are made at the plant level (sub-level) of the sites. Delegations and substitutions can generally be defined as time-limited or unlimited. Notification settings can also be defined at the bottom of this page.

Deputy for Approvals - Deputies are available for applicants to choose from in addition to the applicants for approvals. You will be notified by email when a deputy has been selected as an approver.

Plant (Name)
Selected (0) ▼

☐ Limited ☐ Unlimited

dd.mm.yyyy dd.mm.yyyy

Plant (Name)	Deputy	Unlimited Start Date
No record available		

Add Deputy Procedure

1. Select the "Delegation & Substitution" tab
2. Select "Active Delegation / Substitution"
3. Select the relevant plant
4. Appoint the relevant person
5. Decide on the time limit
6. Add your selection
7. To activate, click the "Save" button

→ Steps 3-7 must be performed individually for each plant

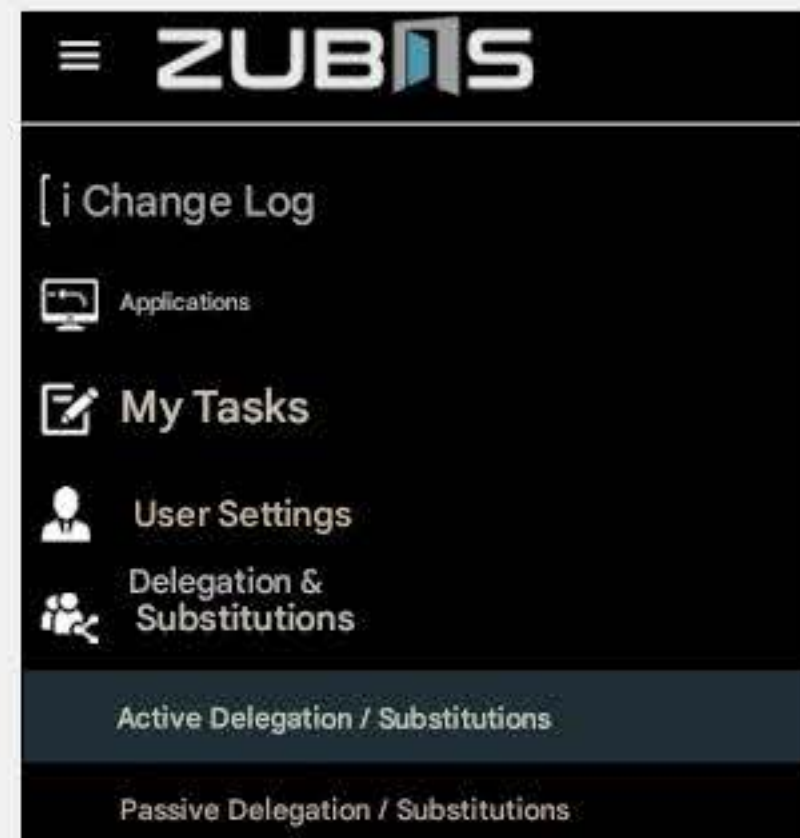

1.5 Delegation & Substitutions

Active Delegation / Substitutions

Substitutions can also be defined for the topic of application administration. This means that your deputy can see your "own applications" for the corresponding project and perform actions on them (e.g., renewing ID card authorizations).

The deputies are defined in the section "Deputy for Application Administration." The rights here refer exclusively to the application topic and not to a substitution for approval.

Under "Notification Settings," you can define whether or not you want to be notified by email about application changes made by your deputy.

User Settings

Define your desired options for delegations or deputies here. The definitions are made at the plant level (sub-level) of the locations. Delegations and deputies can generally be defined as time-limited or unlimited. Notification settings can also be defined at the bottom of this page.

Deputy for Application Administration - Deputies are able to view and process your submitted applications (extend, shorten, etc.). You will be notified by email after processing. This can be individually defined in the "Notification Settings" below.

Plant (Name) Selected (0) Add Deputy

☐ Limited dd.mm.yyyy dd.mm.yyyy Add

☐ Unlimited

Plant (Name)	Deputy	Unlimited Start Date
No record available		

Procedure

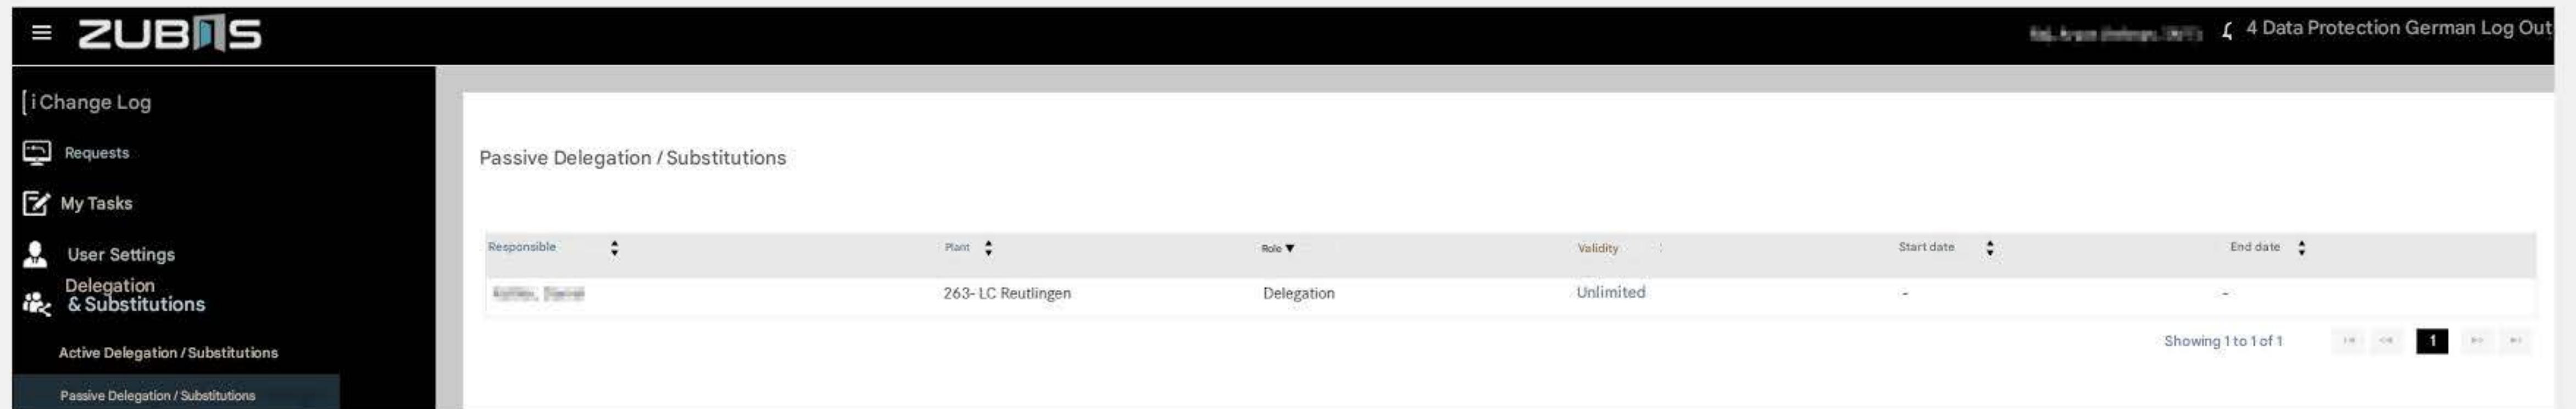

1. Select the "Delegation & Deputation" tab
2. Select "Active Delegation / Deputation"
3. Select the relevant plant
4. Appoint the relevant person
5. Decide on the time limit
6. Add your selection
7. To activate, press the "Save" button

→ Steps 3-7 must be performed individually for each plant

1.5 Delegation & Substitutions Passive Delegation / Substitutions

Passive Delegation / Substitutions shows who has set up a delegation or substitution for me.

This view lets the user know with whom and for how long they have the role of delegate or deputy for a specific area zone.

The screenshot shows the ZUBASweb interface. The top navigation bar includes the ZUBAS logo and links for '4 Data Protection German Log Out'. The left sidebar contains a menu with 'Change Log', 'Requests', 'My Tasks', 'User Settings', and 'Delegation & Substitutions'. The 'Delegation & Substitutions' section is expanded, showing 'Active Delegation / Substitutions' and 'Passive Delegation / Substitutions'. The 'Passive Delegation / Substitutions' view displays a table with the following data:

Responsible	Plant	Role	Validity	Start date	End date
Responsible	263- LC Reutlingen	Delegation	Unlimited	-	-

At the bottom right of the table, it says 'Showing 1 to 1 of 1'.

3

1.5 Delegation & Substitutions Possible and Impossible Use Cases

Possible:

2-level delegation & substitutions: X delegates to Y. Y sets up a substitution for Z.

It is possible for a delegate to set up a substitution for themselves. The substitution can be selected as an approver by the requester in step 3 (Approver) via the icon.

1.5 Delegation & Substitutions Possible and Impossible Use Cases

Impossible:

Two-level delegation & delegation: X delegates to Y. Y delegates to Z.

It is not technically possible for a delegation to take effect from an already delegated person.

1.5 User Settings – Notification Settings

Notification options can be defined here.

1.6 Reports

The "Reports" function is generally available to all users. It allows you to export a list as a PDF or Excel file of those applications for which the logged-in user has made the decision as an approval. As a rule, only managers can use this function for its content. However, the function is available to all users because any user can assume the role of approver through delegation and/or substitution. Therefore, non-managers can also generate such lists if necessary. The

results list can be filtered by status and time period.

1.7 Systeminformation

The system is optimized for use on mobile devices. This means that the display adapts to the respective screen or window size.

ZUBASweb is available in English and German. The toggle function between German and English display (1) is located in the main bar.

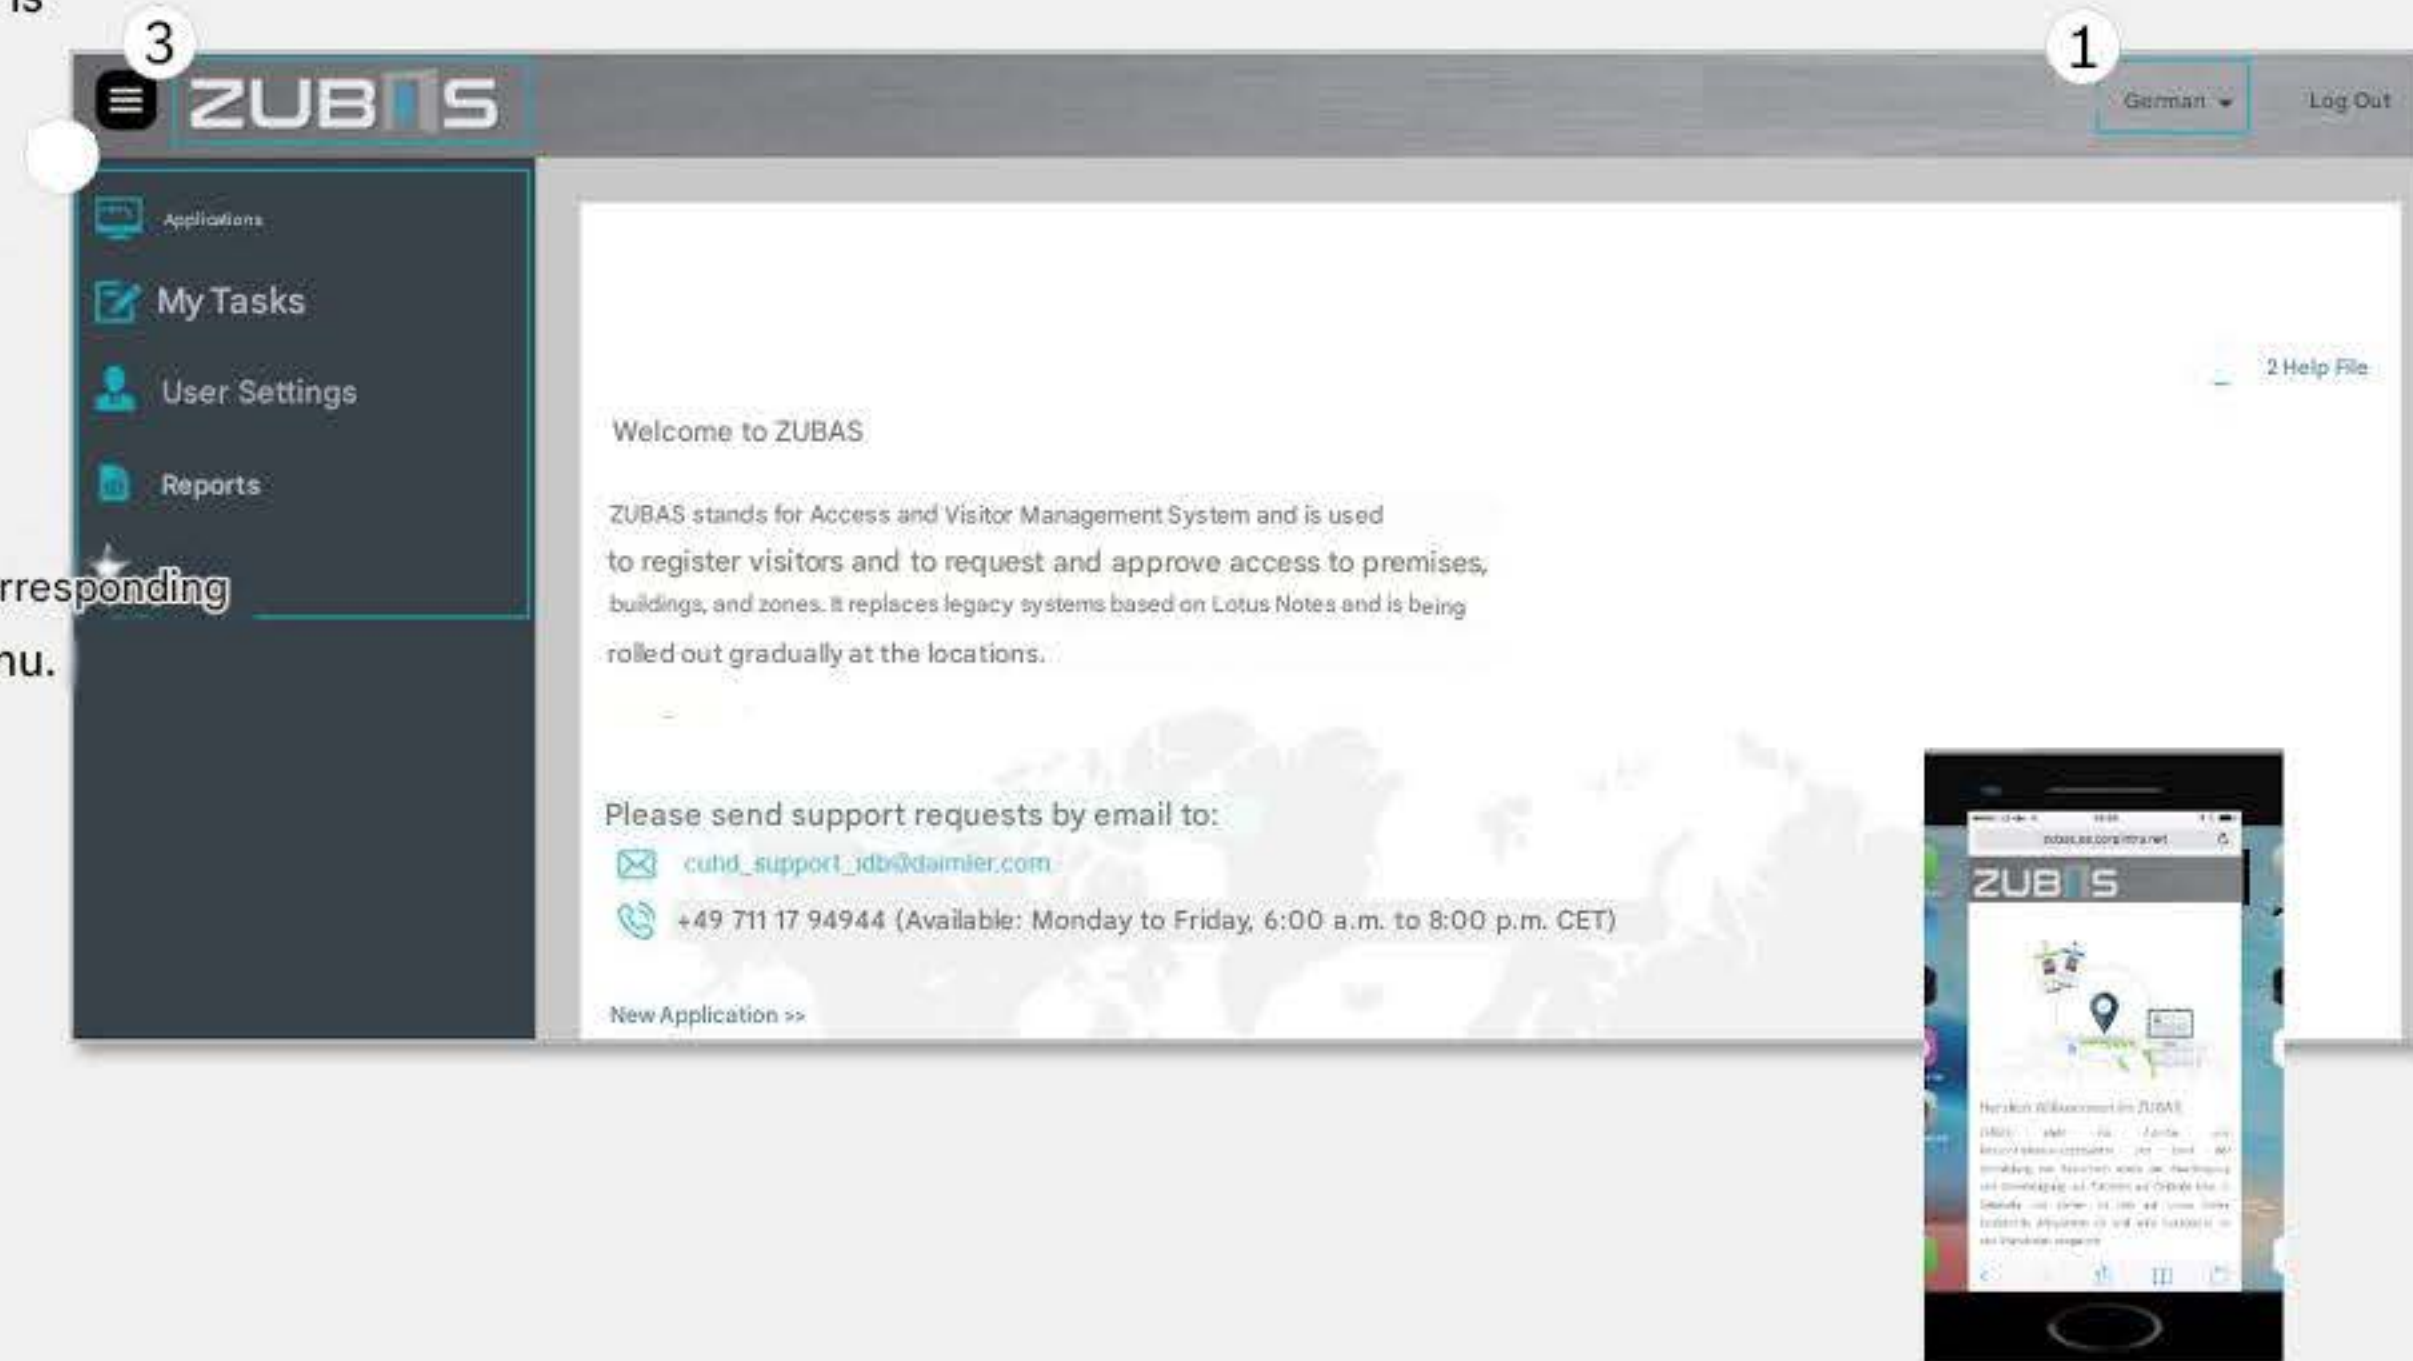

The individual functions (2) of the application can be accessed in the menu area. The menu area is dynamically generated and can display different content depending on the user's role.

Important: Accessing menu items or clicking the ZUBAS logo discards all current entries and activates the selected menu function. Previously entered data is lost and cannot be recovered. When the menu is adjusted to the corresponding screen or window size, it is displayed vertically instead of horizontally. This may only affect parts of the menu.

The standard menu includes the following menu items:

- New Application
- Approvals
- My Applications
- User Settings

Additionally, the homepage can be displayed at any time by clicking on the ZUBAS logo.

1.7 System Information

If information is incomplete, the system automatically generates a note in the relevant location (1) and displays a message (2) in the upper part of the workspace. The workflow can only continue after all data has been entered.

Note messages and messages confirming successful processing are also displayed in the upper area - e.g., for successful application submission (3).

2 Error occurred: Please check the fields marked in red.

2 & Add Person

When entering information about person(s) (1), the person group must first be selected by marking the corresponding radio button.

External Worker - Business relationship with another company or institution (contracting, information visit, company representatives, etc.).

Private Individual - Based not on a relationship with other companies but directly with the person (e.g., job interviews)

Employee - All employees of Mercedes-Benz AG (incl. subsidiaries >50%) who are listed in the Corporate Directory

This selection determines which data will be requested/displayed in the following dialogs. The selection already changes the list headings. The dialog for entering data for all person types opens via the "Add Person" icon (2).

2.1.1 Visitor for a Day – Add Person

1 Rating

3 + Add New Company

Dialog for Entering Data on External Workers (1)

In principle, up to 50 people from different companies can be recorded in one application. By entering at least two letters in the Company field, the results of the existing companies are displayed in a selection list, from which a selection can be made by clicking. The list contains all results in which the entered string appears in the company name.

By clicking on (2), up to 50 people can be defined for the company defined above in this dialog window

If individuals from another company are to be added to the application, click "Add Person" again.

Alternatively, a new company can be added using the icon (3) and saved to the application by clicking "Add". After submitting the application, newly entered companies will be available to the user for future applications.

Data Entry Dialog for Private Individuals (1)

These are special cases that can only be used for the narrowly defined purpose. The dialog only allows the entry of one person. Furthermore, no data is provided as a selection. The person's data must always be entered completely manually in this case.

2.1.1 Visitor for One Day – Add Person

The screenshot shows the ZUBASweb interface for adding a person to a new application. The main form is titled 'New Application - Visitors' and features a progress bar with four steps: 1. Location (checked), 2. Details (active), 3. Approver, and 4. Confirmation. Below the progress bar, there are radio buttons for 'Person' type: 'Future workforce', 'Private Individual', and 'Employee' (selected). A 'Person Search' dialog box is open, showing a search result for 'Mustermann, Max - mustma'. The dialog box has fields for 'Last Name', 'First Name', 'User ID' (containing 'mustma'), and 'Department'. It also has a 'Search' button and an 'Add' button. A text box in the dialog shows the search results: 'Mustermann, Max - mustma'. The background form has a 'Back' button and a 'Next' button at the bottom right.

Employee Data Entry Dialog (incl. Temporary Employment according to German Law) (1)

The employee dialog provides a search function for entries in the Corporate Directory. Only one person can be selected in the results list (2) and added to the application using the button. The dialog must be reopened for additional persons. A total of up to 20 persons can be entered per application.

2.1.1 Visitor for a Day – Add Person

Add Persons via Bulk Upload

An Excel template (1) can be downloaded for the person types "External Worker" and "Employee". This must be filled with the corresponding data. The data fields differ depending on the person type. For external workers, the date of birth is only required for ID card authorizations.

This Excel template can then be uploaded in the "Add Person" dialog (2).

2.1.1 Visitor for a Day – Add Person

Add People via Bulk Upload

The file can be selected and uploaded using the "Import" button (1) - shown here using the example of a temporary worker.

Temporary Worker Dialog (2): After uploading, the company must be defined. Up to 50 people can be added to a company per Excel template.

Employee Dialog (3): After uploading, the people are displayed in the search results and can be added to the application by clicking "Add".

2.1.1 One-Day Visitor - Details

Define Visit Period

In Period (1), the day of the visit is specified. This can be defined by directly entering the date or by selecting it from the calendar drop-down menu.

The start and end times (2) must also be entered. Here, too, the entry can be made directly in the fields or via the drop-down menu.

The authorization is only valid during the defined period.
An overview of the defined validity periods and time periods can be found under Process Definitions (see Chapter 1.2).

Application Overview

In the "Confirmation" step, an overview of the entire application is displayed. At the end of the registration, all data (1) is displayed in an overview for review. If corrections or additions are still required, you can use the Next and Back buttons within the application to navigate between

Jump to individual pages. The data will be retained in this case. Provided all data is correct, the request can be initiated into the workflow process using the **Submit** button.

After submission, the successful processing and the ZUBASweb number for this request will be displayed.

2.1.2 Visitors – for several days

Visitors

2.1.2 Visitors for Several Days - Location

The screenshot shows the 'New Request' form in the ZUBASweb application. The form is divided into three steps: 1. Location, 2. Details, and 3. Approver. The 'Location' step is active, showing a search bar with 'Testlocation' and a dropdown menu. Below the search bar, there are two lists of zones. The first list, labeled '2 Zone(s) found', contains '2 - Normal Zone' and '3 - Special Zone'. The second list, labeled '3 Zone(s) found', contains '1 - General Access', '2 - Normal Zone', and '3 - Special Zone'. A 'Next' button is visible at the bottom right. The form also includes a 'Request Type' dropdown set to 'Visitor' and a 'Rating' star icon in the sidebar.

When selecting visits, the sub-areas with their respective individual zones are displayed.

All available zones (1) are listed on the left. These can be selected according to the standard functions and then added to the selection (4) by clicking on the highlighted arrows (2) in the middle or by dragging and dropping (3). Important: At least one zone must be selected in each request. The zones accessible to all Mercedes-Benz employees per plant are already included in the selection by default. These can also be removed using the arrows, thus eliminating the need for additional approval of this zone

Tip: After multi-selection (Ctrl), all selected zones can also be moved using the arrows.

When entering information about person(s) (1), the person group must first be selected by marking the corresponding radio button.

External worker - Business relationship with another company or institution (commissioning, information visit, company representatives, etc.).

Employee - All employees of Mercedes-Benz AG who are listed in the Corporate Directory (according to German law, also temporary agency workers).

This selection determines which data will be requested/displayed in the following dialogs. The list headings will change accordingly. The Add Person icon (2) opens the data entry dialog for all person types.

Dialog for entering data for external workers (1)

In principle, up to 50 people from different companies can be recorded in one application. By entering at least two letters in the Company field, the results of the existing companies are displayed in a selection list from which a selection can be made by clicking on the company name. The list contains all results in which the entered string appears in the company name.

+ Add New Company

Company

If the order is subcontracted, the subcontractor must be entered here instead of the main contractor.

Rhenus

Fa. Rhenus SE & Co. KG, Benzstrasse, 71063, Sindelfingen

RHENUS SE & Co. KG, Hauptstr. 115, 70461, Muggensturm

Rhenus AG, Am Mittelweg 23, 70027, Stuttgart

Rhenus AL Wierth GmbH, Dr. Hans-Mohr-Strasse 2, 76744, Wierth am Rhein

By clicking (2), up to 50 people can be defined for the company defined above in this dialog box.

If people from another company are to be added to the application, "Add Person" must be clicked again.

Alternatively, a new company can be added via the icon (3) and saved to the application by clicking "Add". After submitting the application, newly entered companies are available to all users for further applications.

2.1.2 Visitors for several days - Details

The screenshot shows the 'New Application - Visitor' form in the ZUBASweb system. The form has a progress bar with four steps: 1. Location (checked), 2. Details (active), 3. Approver, and 4. Confirmation. Below the progress bar, there are radio buttons for 'Person' (Future workforce) and 'Employee' (selected). A search bar is visible with fields for Last Name, First Name, and Company. A 'Person Search' dialog box is open, showing a search result for 'Mustermann, Max - mustma'. The dialog box has a 'Search' button and an 'Add' button. The background form has a 'Template' button and an 'Add Person' button. The ZUBAS logo is in the top left corner, and the user's name 'PIDDB, Pool ID (CS/CF) German' and a 'Logout' link are in the top right corner. The Mercedes-Benz logo is in the bottom left corner.

1 Person Search

2 Search Results

Employee Data Entry Dialog (incl. Temporary Employment according to German Law) (1)

The employee dialog provides a search function in which entries in the Corporate Directory can be searched. Only one person can be selected in the results list (2) and added to the application using the button. For additional persons, the dialog must be opened again. A total of up to 50 persons can be recorded per application.

When entering information about person(s) (1), you must first select the person group by marking the corresponding radio button.

External worker - Business relationship with another company or institution (contracting, information visit, company representatives, etc.).

Employee - All employees of Mercedes-Benz AG who are listed in the Corporate Directory.

This selection determines which data is requested/displayed in the following dialogs. The list headings change with the selection. Add person via the icon (2) The dialog for entering data opens for all person types.

2.1.3 ID Card Authorization - Details

Note: Depending on the location, the data entry form for temporary workers may differ. If necessary, please refer to the [dialog entry for temporary workers visiting the site](#).

★ Advice Dialog for Entering Data on Temporary Workers (1)

In principle, up to 50 people from different companies can be recorded in one application. Data entry is based on last name, first name, and date of birth. The search can only be started with complete data. Based on this data, a database is searched for matches.

Existing Temporary Workers (2): Entry can be copied. If necessary, the company can be adjusted ("Change Company")

New Temporary Workers (3): Another dialog for entering personal data opens via "Add".

Note: Please check your data for completeness. If this is indeed a new external worker, it is recommended to attach a photograph directly to the application - see [here](#).

Further information can be found in the FAQs.

2.1.3 ID Card Authorization - Details

Employee Data Entry Dialog (incl. Temporary Employment according to German Law) (1)

The employee dialog provides a search function for entries in the Corporate Directory. Only one person can be selected in the results list (2) and added to the application using the button.

The dialog must be reopened for additional persons.

A total of up to 20 persons can be entered per application.

2.1.3 ID Card Authorization - Details

Add people via bulk upload

An Excel template (1) can be downloaded for the person types "External Worker" and "Employee". This must be filled with the corresponding data. The data fields differ depending on the person type. For external workers, the date of birth is mandatory. A check for an existing ban from the premises is carried out based on this information.

This Excel template can then be uploaded in the "Add Person" dialog (2).

ZUBASWEB CHANGES TO APPLICATION TYPES

What's changing for you

Changes to Application Types

On January 27, 2026, ZUBASweb will receive an update regarding the authorization application logic.
From now on, the following two application types are available for requesting authorizations: Visitor and Badge Authorizations.

To explain the changes, here is a brief explanation of the current situation and the upcoming changes.

Current Workflow

Set Application Type

A screenshot of the 'New Application' form. At the top, a progress bar shows four steps: 1. Location (active), 2. Details, 3. Approver, and 4. Confirmation. A large blue arrow points down to the 'Application Type' dropdown menu, which is currently set to 'Day Visit'. Below the dropdown, a list of options is visible: 'Please Select', 'Day Visit', 'Multi-Day Visit', and 'Permanent Access'. To the right, the 'Location' dropdown is set to 'Bremen'. A 'Next' button is at the bottom right.

Set Location

Set Person Type

A screenshot of the 'New Application - Day Visit' form. At the top, a progress bar shows two steps: 1. Location (active) and 2. Details. A large blue arrow points down to the 'Person' section. Under 'Person', there are two radio buttons: 'Future workforce' (selected) and 'Private individual'. Below this, there are input fields for 'Last Name' and 'First Name'. At the bottom, it says 'No Record Found'.

Changes to Application Types

How the new process works:

01 Define Location

The first step is to select the location for which the application should apply.

02 Define Application Type

Visitor

Individuals with a one-time visit purpose.

Maximum Duration:

External workers max. 28 days.

Private individual 1 day.

→ This person receives a visitor badge at the gate.

Badge Eligibility

For authorizations that are to be transferred to a personalized badge to be issued.

→ Applies to internal employees and external workers with a badge.

The duration can be chosen flexibly:

- External individuals: 1 day to max. 1 year
- Internal individuals: 1 day to max. 2 years.

03 Define Person Type

Are the beneficiaries

Employees

External workers or

Private individuals

Important for external workers:

→ A badge will only be issued for a minimum duration of 28 days

→ Before applying, check whether an ID card for a foreign worker already exists. If not, and the duration is less than 28 days, use the visitor application type.

→ If no ID card exists and the authorization to issue an ID card is less than 28 days, a temporary ID card can be issued at the gate.

Changes to Application Types

How the new process works:

Set location

Set application type

Set person type

A screenshot of a web form titled "New application". At the top, a progress bar shows four steps: 1. Location, 2. Details, 3. Approver, and 4. Confirmation. Step 1 is active, indicated by a blue circle and a blue arrow pointing down to the "Location" field. The "Location" field is a dropdown menu with "Bremen" selected. Below it, a checkbox labeled "Bremen Plant" is checked. To the right, the "Application type" field is a dropdown menu with "Please select" chosen. A dropdown menu is open below it, showing options: "Please select", "Visitor", and "ID authorization".A screenshot of a web form titled "New application - Visitor". At the top, a progress bar shows two steps: 1. Location and 2. Details. Step 1 is active, indicated by a blue circle and a blue arrow pointing down to the "Person" field. The "Person" field has two radio button options: "Future workforce" (selected) and "Private individual". Below these, there are input fields for "Last name" and "First name". At the bottom, it says "No record available".

So what has changed?

More transparency and consistency

The revised application process ensures greater efficiency and consistent handling of authorizations and badges. This applies to

both internal and external employees.
Visitors

Changes for visitors

- Only one application type

Merging of day and multi-day visits.

- For day registrations, it is now possible to apply for several zones in addition to the standard zone (may require approval).

Fremdarbeitskräfte

One badge medium for external workers

- By eliminating day and multi-day registrations for external workers with personalized badges, it is now ensured that authorizations valid for 1 day or more can be transferred to the badge.
- An additional visitor badge is no longer required.
- Ideally, as the applicant, you should know whether an external worker already has a badge and apply accordingly for the appropriate application type (visitor/badge authorization).

So what has changed?

Greater transparency and consistency

The revised application process ensures greater efficiency and consistent handling of authorizations and badges. This applies to both internal and external employees.

Internal employees at German locations

- Internal employees continue to be automatically authorized to access all standard site zones at German locations with their badge from the start of their contract.
- Additional authorizations only need to be requested for access within the site => via badge authorizations.
- For foreign employees at a Mercedes-Benz location (>50%), only badge authorizations will be requested in the future.

These individuals will receive either a key card for recurring visits or a temporary badge at the gate for the duration of their visit.

- Local regulations continue to apply to international locations.

Further information on access and authorizations can be found on the social intranet. _____

2.1.4 New Application Logic – Shortening/Cancelling Individual Persons

Previously, an applicant had no way to cancel an individual person or shorten their period within their own ZUBAS application.

In the future, applicants will be able to individually shorten or cancel individual persons within an existing ZUBAS application. The new user interface now provides a checkbox for each person after the application has been approved. You simply need to click on one of these persons and then click on "Individually Shorten/Cancel".

A new pop-up window will then appear where you can submit your shortening or cancellation.

3	Building 80, EG, 1st and 2nd OG, B-D
4	Building 80, 1st floor, EG, 1st floor E-G
5	Building 80, Ground Floor, Corridor AMP Room

2.2 Approvals - Approver Scope

Approver Scope

You are registered as an approver in the listed zones. These entries cannot be edited independently. For changes, please contact the responsible plant security officer.

Son number	Zone Name
2415	Building 6 - Underground Parking
2417	Building 6 - Ground Floor
2528	Building 6 1st Floor

1 to 3 of 3

What does "Approver Scope" mean?

The "Approver Scope" menu item is a special view for indoor zone approvers. If they have been registered as an individual approver for an indoor zone, they can view all zones here on their own responsibility. Currently, no changes can be made here. For this, the local plant security officer must be contacted

Note: This view focuses exclusively on the topic of interior zone approvers. Hierarchical approval scopes are not included in this overview.

2.2 Approvals

Open Approvals

1 to 3 of 3

How is an approval made?

Approvers receive an email notifying them that a request requires approval/rejection. This email contains a link (1) to the respective request, which can be used to open the request for editing. All requests awaiting approval can also be viewed and accessed for editing via the "Open Approvals" menu item (2).

This view is limited to the scope assigned to the logged-in user (3). An application is accessed for processing by clicking on the corresponding line (4).

ZUBAS

Request Number: ZUBASDE202000320997

-GERMAN-

Dear Ms. Mustermann,

Your application has been approved. The authorization is now available on the ID card. If you do not yet have an ID card, you must collect it on your first working day by presenting an official photo ID at the responsible ID card office.

****Important Note:** Due to current circumstances, please note the location-specific regulations for collecting an ID card.

Further information and details can be found in the application.

For technical problems and questions regarding the application, please contact CUHD: cuhd.support@idb@daimler.com or +49.711.17.94944.

Why is approval management needed?

Approvers can use this to get an overview of currently issued permits (1). A location and zone must be selected for evaluation (2). Then, you can search or filter for the desired data (3). Clicking the "PDF" button creates a PDF file with the application information. Clicking the "XLS" button creates an Excel spreadsheet with the application information.

This is only a reporting feature! No approvals are granted or revoked here!

What is the purpose of the view tile?

Users have the opportunity here to get an overview of the applications with regard to their role stored in the system (applicant, approver, 1st/2nd host) (1).

To display the available data, you can specify the time frame to search within under "Search for" (2). You can also distinguish between "Active" and "Expired" applications (3). If data is available for the selected conditions, it will be displayed in the table below (4). It is important to note that the current status of the application is also shown in the "Status" column (5).

This is only an overview page of the applications! Applications cannot be submitted, modified, or deleted here!

Request Approval

Each zone to be approved is displayed on its own line. The zones are divided into the corresponding work parts (sub-areas). An individual decision (Approve/Deny) (1) can be made for each zone

If a zone is rejected, a reason must be entered in the "Comment" field. A collective decision can also be made for a zone per plant area. By marking the gray row in block (2), this decision is marked for all zones in that block. Individual changes can then be made for each room zone. Clicking the "Submit" button makes the decisions effective and triggers the corresponding follow-up steps.

Note: Decisions can only be made based on the complete application and are therefore effective for all persons included in it.

2.3 My Applications

The screenshot shows the ZUBASweb interface. On the left is a sidebar with a menu containing 'Applications', 'New Application', 'My Applications' (highlighted with a blue bar and a circled '1'), 'My Tasks', 'User Settings', 'Reports', and 'Rating'. The main area is titled 'My Applications' and contains a search section with a 'Search for' dropdown (circled '2'), a 'Time Period' dropdown, 'Created by' and 'Created until' date pickers (circled '4'), and 'Active'/'Expired' radio buttons (circled '3'). Below the search section is a table with columns: Time Period, Number of People, Application Type, Company, Location, Application Number, Applicant, and Status. The first row of the table has a tooltip (circled '6') showing the number '1' over the 'Number of People' column. The 'Application Type' column has a filter icon (circled '5'). The table contains three rows of application data.

Time Period	Number of People	Application Type	Company	Location	Application Number	Applicant	Status
30.11.2020	1	Day Visit	None	TESTLOCATION ACS	ZUBASDE202000320995	Mustermann, Max	✓

3 Additional Functions

ZUBASweb Manual

3.1 Email Function

The system automatically generates and sends the following emails

- Email to host/applicant upon successful submission of a registration/application
- Email to second host - Email to approver for approval
- Email to approver informing the applicant that a representative has been chosen
- Email to applicant when approval has been granted
- Email to applicant when a rejection has occurred
- Email to applicant 28 days before expiry for permanent authorizations
- Email to recipient upon transfer of registrations/applications
- Email to approver when registered delegation or representation is no longer valid
- Email to delegate/representative when they have been newly registered or removed from this role
- Email to applicant when the application has been edited by a delegate or deputy

ZUBASweb Manual

3.2 Role Application "External Applicant"

External representatives to Mercedes-Benz can be granted access to the ZUBASweb application, including in the role of applicant, if operationally necessary.

Scope and Responsibilities

In principle, an external applicant is enabled to access the application for a defined location and to submit applications independently. In this role, they act as the applicant. The Mercedes-Benz representative (user created in EMT) is automatically designated as the primary host and also automatically as the first approval level for the application. External applicants cannot make their own approvals.

The role of External Applicant for an individual requires the explicit approval of the responsible Mercedes-Benz E3s. This is addressed as a separate process step in the role application process via Alice.

Two steps are necessary for the application:

1. Basic access to internal Mercedes-Benz Group systems via EMT
2. Applying for the "External Applicant" system role for ZUBASweb via Alice

For further information, please contact your local site security.

3.3 Data Protection Information

Please see our data protection information at the following link.
